## **Abstract of Django Internship Project**

**Project Name: School student Attendance Management**

In this project of School Student Attendance Management we will have 3 Roles

1. Class Teacher
  2. Student
  3. Admin/Principal
- Admin gives permission to new users as per their roles and can view all students attendance of all Classes
  - Class Teacher can add and remove students and take attendance daily of his/her respective class and send reports to Parents through Mail
  - Student can view his/her attendance

Databases:

- Users
- Student Details (Name, Class/Standard)
- Attendance (Absent dates of students)
- Working Dates of each class (Dates of working Days in school)

**Idea of attendance database:**

We will store dates on which a student is absent and total no of working days

In this way we can save space on the memory and display the Present data using Working Dates-Absent Dates
